FLOORING SOLUTION!

Ready to use in less than ONE HOUR

Here is why our reactive resin seamless flooring is perfect for you.

Silikal is a wear and tear-resistant, slip free, non porous, poured flooring system. Silikal flooring has amazing durability and longevity making it outstanding for the milk production industry. Best of all Silikal has an extremely short cure time. After **ONLY ONE HOUR**, Silikal reactive resins attain their full mechanical and chemical resistance properties meaning no interruption to your business.

Heavy traffic, wear-and-tear and corrosion - "normal" floors get nasty when they are exposed daily to such extreme stress. They become gritty, form cracks and holes, and ultimately fall apart. Costs incurred by bothersome repairs, production interruptions, or even standstills are the usual result, not with Silikal floors.

**Silikal floors
just the thing when
things get rough**

Our poured seamless flooring
is fully cured in **LESS THAN ONE HOUR**.
A perfect way to avoid standstills
in your operations!

The physical and chemical properties of Silikal's dense reactive resin coatings prevent liquids and contaminants from penetrating into the substrate allowing the growth of fungi and bacteria - essential in areas where hygiene is of the utmost importance i.e. milk tank rooms. Most importantly a Silikal floor is easy-to clean and care for. Silikal is a superior flooring system, your flooring solution.

The Advantages Of Silikal

- No interruption to day to day operation
- Maintain transport driver's schedule
- Maintain normal filter change schedule
- Maintain tank cleaning schedule
- Fast Curing ready in **LESS THAN 1 HOUR** after installation
